## Vacuum Testers

### PEG Model Vacucheck 90

These vacuum testers are lightweight and portable enabling them to test valve seat sealing from the manifold ports.

Continuous vacuum tests, without valve springs fitted can be carried out eliminating the need for valve seat blue-in tests and other time consuming procedures.

Fast check of your 'valve seat-to-valve' contact prevents embarrassing come-backs and gives you prior warning when your seating equipment requires attention or adjustment. Introducing this test can only improve the quality of the work you are producing.

**The FONDERA Model F2578**  
(photos to the left and right refer)  
has an additional feature in  
that it can do a leakdown test.
